## Features

The tripod can hold either 1 or 2 TL2 lamps as they are not so heavy.

The TL2 lamps are attached using the clip connector rods.

It is recommended to use 2 pieces of the X-lamps (particularly X4) for stability of the tripod.

X2 and X4 are screwed on using the finger screws and nuts.

X4 comes with a strong velcro band. The band can be used for holding the cable when the lamp is not in use or to fix the cable to the tripod when in use. It can also be used for securing the lamp, if you want to place the lamp closer to the center of the tripod for stability.

All lamps can be secured underneath or above the bar depending on which way you want them to tilt.
